

RULES & REGULATIONS

1

Decide on how to get the Target Number.

8 4

$$8 + 4 = 12$$

or

$$8 \times 4 = 32$$

You can either add or multiply the two Target Dice to get the Target Number.

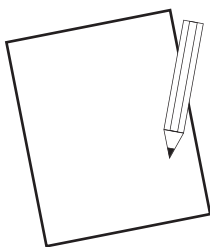

2

Decide on what operations are ok to use: addition, subtraction, multiplication, division, exponents...

3

Decide whether players can use paper and pencil...

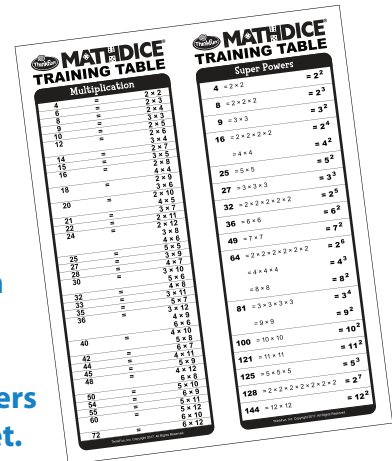

or

...or mental math only.
No calculators!

4

Decide whether players can look at the Math Dice Super Powers Cheat Sheet.

5

Decide what happens when two players call out the same answer simultaneously. We recommend calling a do-over.

6

Decide on a penalty if a player cannot state a correct Math Dice expression to back up a winning answer. We recommend that each player is allowed one do-over each game. After that, when a player can't state their expression all other players get a point.
